DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/19/07 has been entered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1 -36 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. Claims 1, 11,21, 31 and 35 recite the phrase "need to be" which is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. The phrase "need to be" renders the claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely optional, and therefore not required, or (b) a required feature of the claims.

Allowable Subject Matter

4. Claims 1-36 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
5. The following is a statement of reasons for the indication of allowable subject matter: The present invention is directed to a method of communicating cryptographic data through multiple network layers by, the uniquely distinct feature of, simultaneously encapsulating the

cryptographic data into multiple fields associated with the different network layers. The closest prior art, Huitema (USPGPub No. 20040010683), teaches a message authentication method and system in which the message contains a network address, a portion of which uses digital fingerprinting to verify the identity of the sender. The prior art, taken alone or in combination, fails to anticipate or fairly suggest the limitations of applicant's independent claims.
